SMART HEATED VEST

Developed by Lee Yin Group, Singapore's first Heated Vest taps on SIMTech's proprietary printed electronics technology that uses conductive ink.

www.leeyinapparel.com

SMART HEATED VEST

- In 2018, Lee Yin successfully co-developed the first designed-in-Singapore *Printed Heated Garment* with SIMTech (Singapore Institute of Manufacturing Technology)
- The vest has 3 printed heater panels (1 back, 2 front pockets), which convert electrical energy into thermal energy using a Portable USB power bank
- The heated vest was launched commercially in Singapore Coldwear outlets in May 2019

Environmental, Social & Governance

Sustainability

Sustainability is important to us because we understand that it promotes a better economy with less waste and pollution, fewer carbon emissions, and more job opportunities; thus, these are our own ways of incorporating sustainability into our business practice.

Renewables

In our Tangerang unit, we have placed solar plants relying on solar energy, a form of renewable energy. It also reduces our dependency on fossil fuels and foreign oils and is pollution-free

Social

Paying fair wages is an important aspect of sustainability. We at Lee Yin go above and beyond the legal minimum wage to embrace the concept of fair wages.
